DRIVER DISPATCH & LIVE TRACKING

Fleet Operator Overview

FareeWay is a driver dispatch and live tracking platform built specifically for limousine and black-car fleets. Operators dispatch trips with full client and pickup details, and both dispatchers and clients can track the vehicle's exact location in real time, from the moment the trip is sent to drop-off.

Tracking that doesn't quit when the phone locks

Most dispatch apps stop reporting location the moment a driver's screen turns off — so the dot drifts, lags, or freezes. FareeWay keeps tracking continuously, locked phone or not, so dispatchers and clients always see the true location of the vehicle, not where it was thirty seconds ago.

Key Features

- **Dispatch**
Trips land on the driver's home screen and schedule instantly — client name, pickup address, and timing, ready before they get in the car.
- **Live Tracking**
Continuous location tracking, even when the phone is locked, with a shareable client tracking link that always shows the current position.
- **Trip Details**
Full trip lifecycle — pickup, dropoff, mileage, and estimated drive time — with one-tap navigate, call, or message, without leaving the app.
- **WhatsApp Dispatch**
Operators create and dispatch trips straight from WhatsApp — wired to work natively with the chat platform, so trips flow right into the app.
